VIS FLR 4896-L2

Look forward to presenting in a new way. Vision series mobile boards enable surface writing and marking over posted papers on the reverse. Freely move this solid, steel-framed mobile board from area to area.

# green commitment

We are committed to making our world, entrusted to us by our creator, a healthier place. We will act through our transactions and manufacturing in a manner that makes this possible and actual.

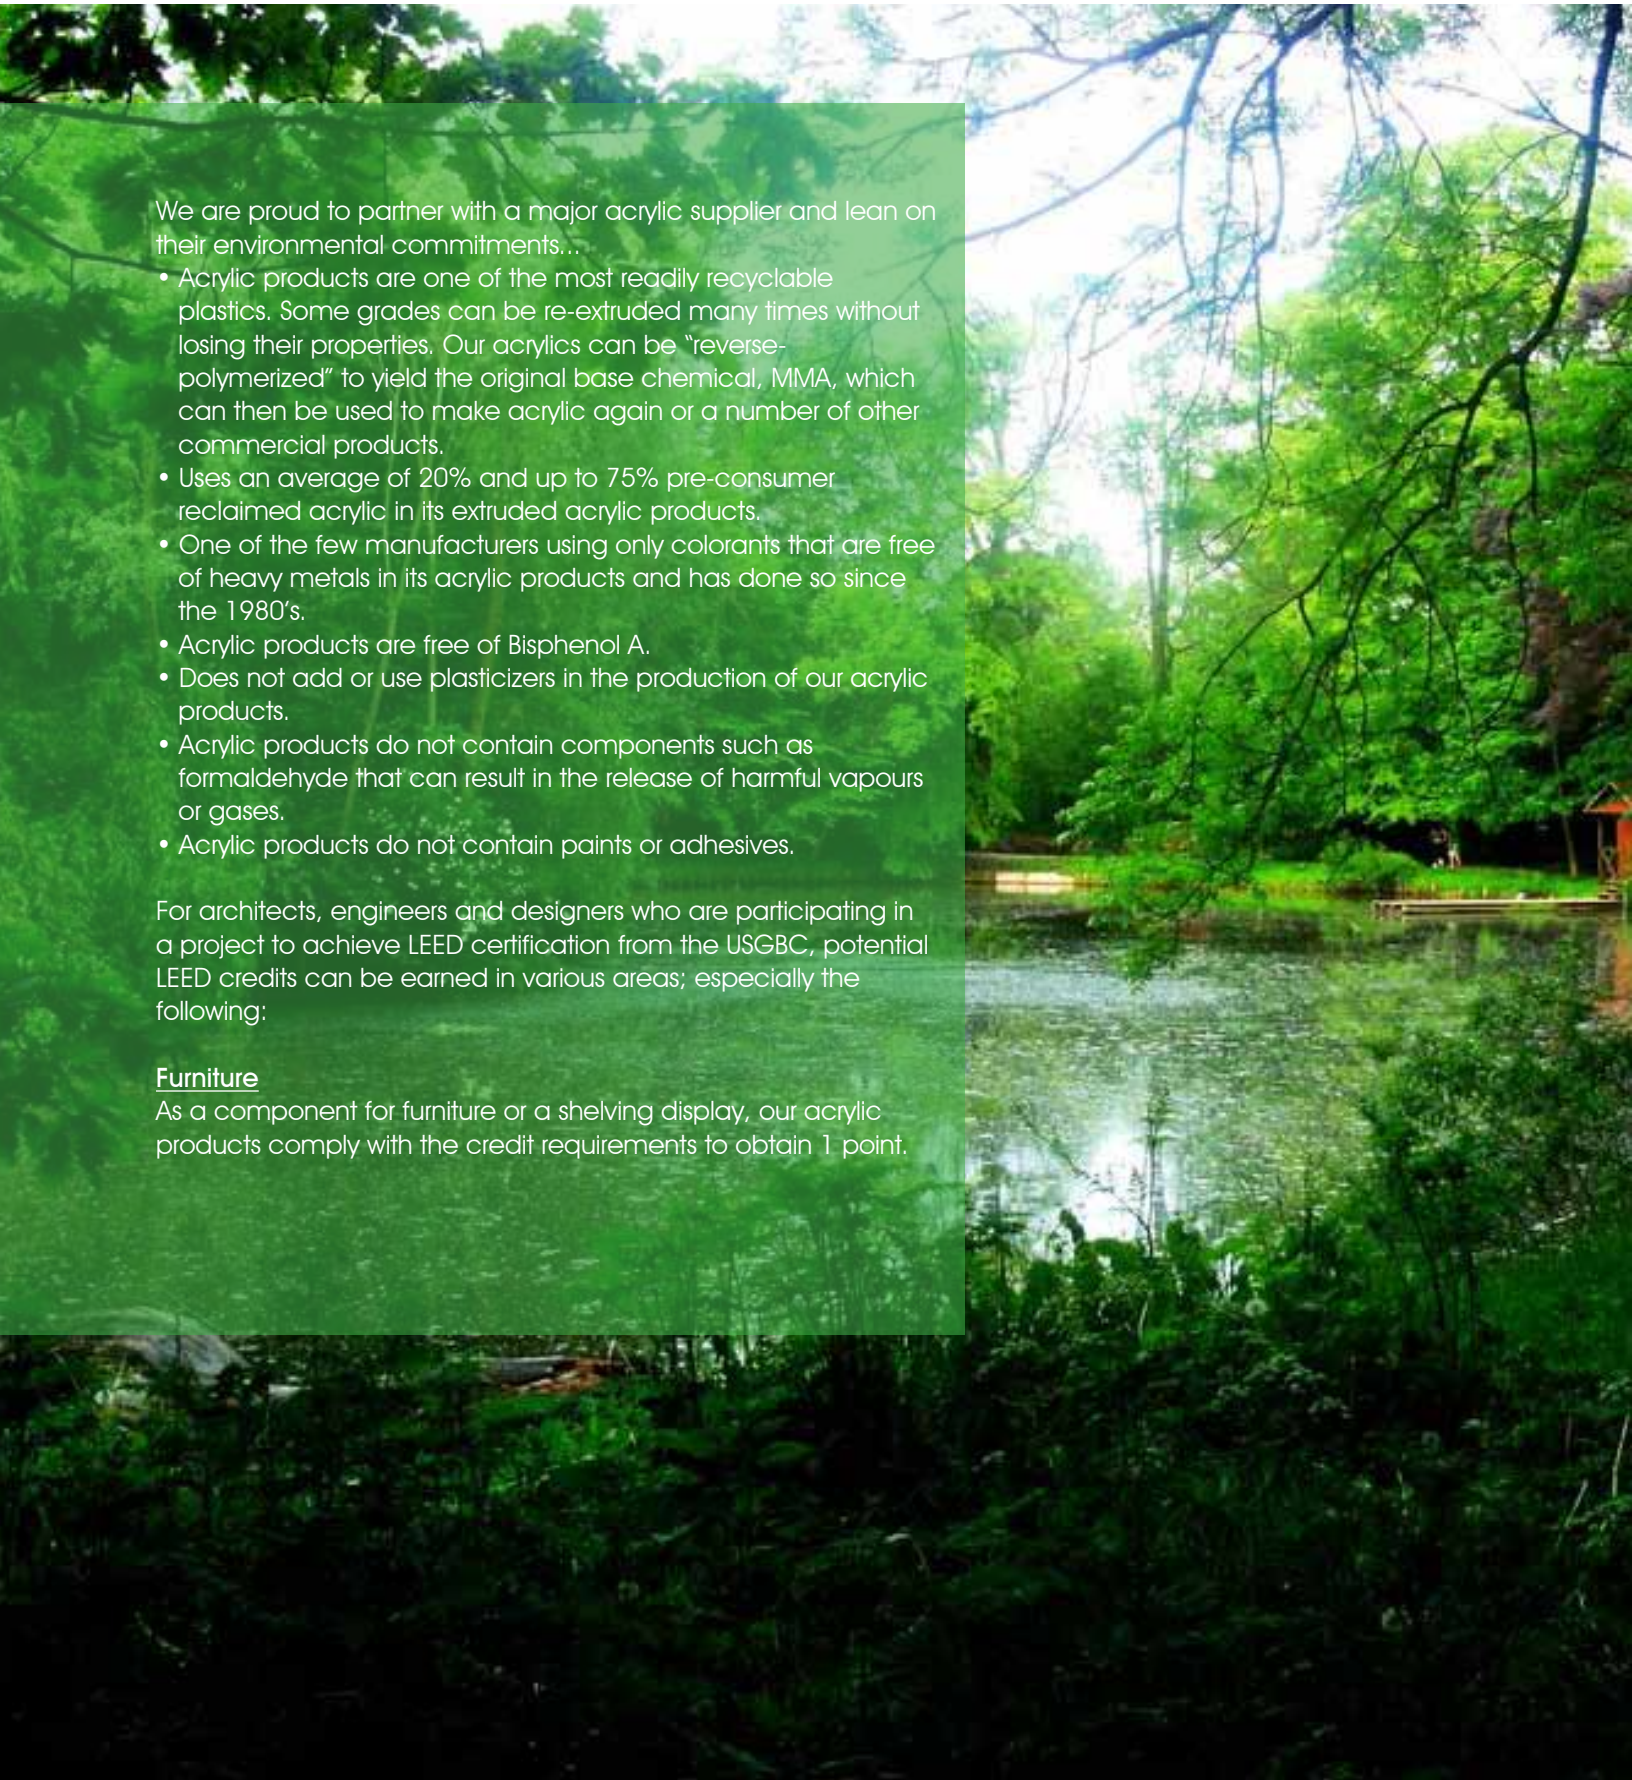

We are proud to partner with a major acrylic supplier and lean on their environmental commitments...

- Acrylic products are one of the most readily recyclable plastics. Some grades can be re-extruded many times without losing their properties. Our acrylics can be "reverse-polymerized" to yield the original base chemical, MMA, which can then be used to make acrylic again or a number of other commercial products.
- Uses an average of 20% and up to 75% pre-consumer reclaimed acrylic in its extruded acrylic products.
- One of the few manufacturers using only colorants that are free of heavy metals in its acrylic products and has done so since the 1980's.
- Acrylic products are free of Bisphenol A.
- Does not add or use plasticizers in the production of our acrylic products.
- Acrylic products do not contain components such as formaldehyde that can result in the release of harmful vapours or gases.
- Acrylic products do not contain paints or adhesives.

For architects, engineers and designers who are participating in a project to achieve LEED certification from the USGBC, potential LEED credits can be earned in various areas; especially the following:

## **Furniture**

As a component for furniture or a shelving display, our acrylic products comply with the credit requirements to obtain 1 point.

# quality commitment

## A Clear Guarantee

Your satisfaction is clearly important. Please let us know of any concern. If you do need to return an item - a return authorization confirmation must be obtained from Clear Future's customer service team before items can be returned and credit issued. Return confirmations are valid 30 days from the date of issue. Return confirmations will not be issued for merchandise after 60 days from the date of invoice. Returns are subject to a 35% restocking fee, and must be returned freight prepaid and in re-saleable condition. Collect shipments will be refused. Credit will not be issued for abused or customer-damaged merchandise.

## Warranty

Clear Future Markerboards warrants that the products manufactured and supplied have been furnished in accordance with the customer's purchase order and authorized modifications inclusive. Clear Future further warrants for 5 years from the original acceptance the workmanship, under normal conditions, of use shall perform in accordance with said documents and modifications.

The manufacturer's obligation under this warranty is limited and at its option, Clear Future may refund the purchase price thereof with allowance made for the service rendered by such products. All products are sold and warranted only pursuant to our published terms and conditions of sale. Except as expressly provided in our published statement we make no warranty, express or implied of any kind, including without limitations, warranties of merchantability or fitness. We are not responsible to the user for any consequential, incidental, or special damages resulting from product use or processing. This limited warranty is from the date of substantial completion of the project. Should any modifications be made to our products by other trades, with or without our consent or prior knowledge in writing, the obligation to warranty may be voided.

## Surface

Our abrasion resistant, non-porous acrylic sheet is produced by applying a very hard, highly crosslinked polysilicate (a silicon polymer or polysiloxane) coating to an acrylic substrate. This coating provides the sheet with a surface that has 45 times the abrasion resistance of uncoated acrylic.

Acrylic sheet is 0.5 inch thick with applied crosslinked polysilicate coating (a silicon polymer or polysiloxane).

The Clear Future Markerboard Acrylic Surface is many times more impact resistant than conventional plate glass and has similar impact strength compared to tempered glass. If it does break, our surface will usually crack or fracture into large pieces with edges that are much less sharp than those of broken glass. In addition to its excellent impact strength, our surface of the same size and thickness is half the weight of glass.

## Hardware/Framing

**Acuity and Acuity Frost Series** – Slight bevel edge, CNC rounded corners, drilled 0.625 inch holes

**Clarity Series** – Extruded aluminum frame channel, marker tray.

**Perception Series** – Extruded aluminum posts, cross frames, marker tray. Cast aluminum legs. Dual wheel casters.

**Vision Series** – Steel frame. Dual wheel casters.
